DETAILED ACTION

1. The present claims are allowable over the "closest" prior art Moffatt et al. '257 (U.S. 6,323,257), Ikeda et al. (U.S. 5,952,429), WO 99/31175, and Moffatt et al. '932 (U.S. 6,221,932) for the following reasons:

Moffatt et al. '257 disclose modified pigment, method for making the modified pigment, and ink comprising the modified pigment wherein the modified pigment comprises organic group comprising the reaction product of pigment having attached electrophilic group with nucleophilic polymer. However, there is no disclosure or suggestion in Moffatt et al. '257 that the resulting reaction product is then further reacted with acylating agent as required in all the present claims.

Ikeda et al. disclose modified pigment, method for making the modified pigment, and ink comprising the modified pigment wherein carbon black pigment with functional group is reacted with polymer that comprises nucleophilic reactive group wherein the resulting reaction product is then further reacted with acylating agent. However, there is no disclosure or suggestion that the functional group present on the polymer is an electrophilic group as required in all the present claims.

WO 99/31175 discloses modified pigment and method for making the modified pigment wherein the modified pigment comprises reacting carbon black pigment which has attached organic group which has attached ionic group with at least one polymer which attaches to the ionic group. However, there is no disclosure or suggestion in WO 99/31175 that the resulting reaction product is then further reacted with acylating agent as required in all the present claims.

Moffatt et al. '932 disclose modified pigment, method for making the modified pigment, and ink comprising the modified pigment wherein the modified pigment is obtained by reacting a pigment having an attached functional group with a nucleophilic polymer. However, there is no disclosure or suggestion in Moffatt et al. '932 that the resulting reaction product is then further reacted with acylating agent as required in all the present claims.

Thus, it is clear that Moffatt et al. '257, Ikeda et al., WO 99/31175, and Moffatt et al. '932, either alone or in combination, do not disclose or suggest the present invention.

In light of the above, it is clear that the rejections of record are untenable and so, the present claims are passed to issue.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
